

# STEMPILOT @Home™

## WHAT IS STEMPILOT @Home™

**STEMPILOT @Home™** is our virtual learning program, complete with our NGSS aligned lesson plans and curriculum.

It offers educators an engaging project-based learning tool for schools to use during this distance learning period. This program uses flight simulation as a "Hands-On" and visual learning tool to apply K-12 S.T.E.M. engineering, science, and math. Our course works great learning from home, a computer lab, or as an after-school activity.

**Visual learning;** students watch videos on the subject, read the lesson, fly the simulator, and take a quiz to move onto the next lesson.

2

2 learning platforms with complete curriculum and lesson plans

Your choice between Canvas and Google Classrooms (requires installation).

## WHAT YOU NEED

This simple to install and use software allows students to continue learning during these uncertain times.

### All you need is:

- A cell phone / Chromebook / tablet
- "Infinite Flight" free download
- A controller or joystick (Chromebook only)
- Eager students ready to **Earn Their Wings.**
